1 Global information

1.1 Preconditions

Install Adobe Reader Version 7.0 or higher.

1.2 Logon

Start any browser and open link <https://b2b.kostal.com/webedi>

Logon to the application:

Logon with user and password you received from KOSTAL. The logon-client is always "001".

1.3 Logout

To Logout close the browser window.

If the browser windows keep open and only the tab is closed, then the user is NOT logged out.

1.4 Navigation

Never use the browser's standard buttons like "Back", "Forward", "Refresh" etc. This dumps the application.

User Manual Inventory Collaboration Hub

Use the menu and "Back" or "Forward" button of the application **only**.

1.5 Search, Filter, Find

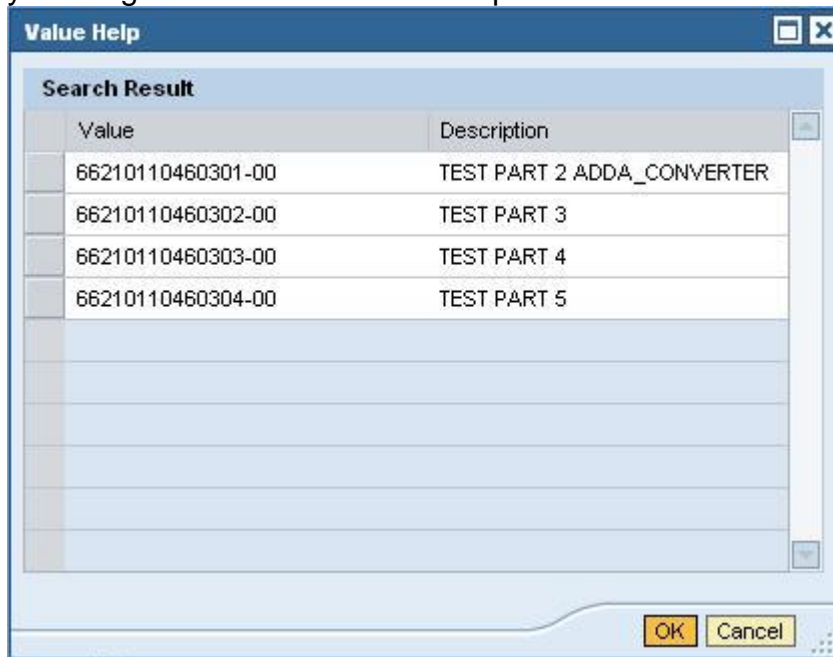

The "Selection" is available in all screens:

Enter your search criteria and press "Go". The system will list the data that match to the criteria, or - if no such exist – an error message.

You may enter - like in the example above - a complete product number or only a part of a text, like "6621011*".

User Manual Inventory Collaboration Hub

Every field with  at the end, offers a value help. Click once with the mouse on this symbol and you will get a new screen with the possible values:

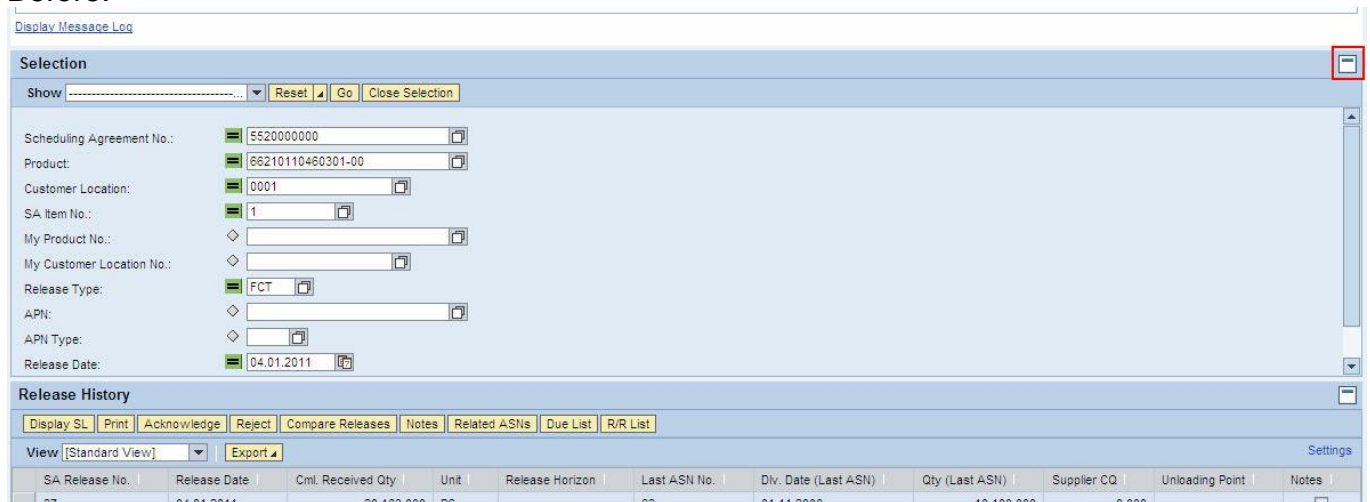

To transfer a value from the search results, click the value you like or mark the line and press "OK".

1.6 Open/Close Tray

In the work areas release details and release comparison very large tables are used. To create more space for important information, it is possible to close less important parts of the screen with  (at the right border of the window).

Before:

Afterwards:

User Manual Inventory Collaboration Hub

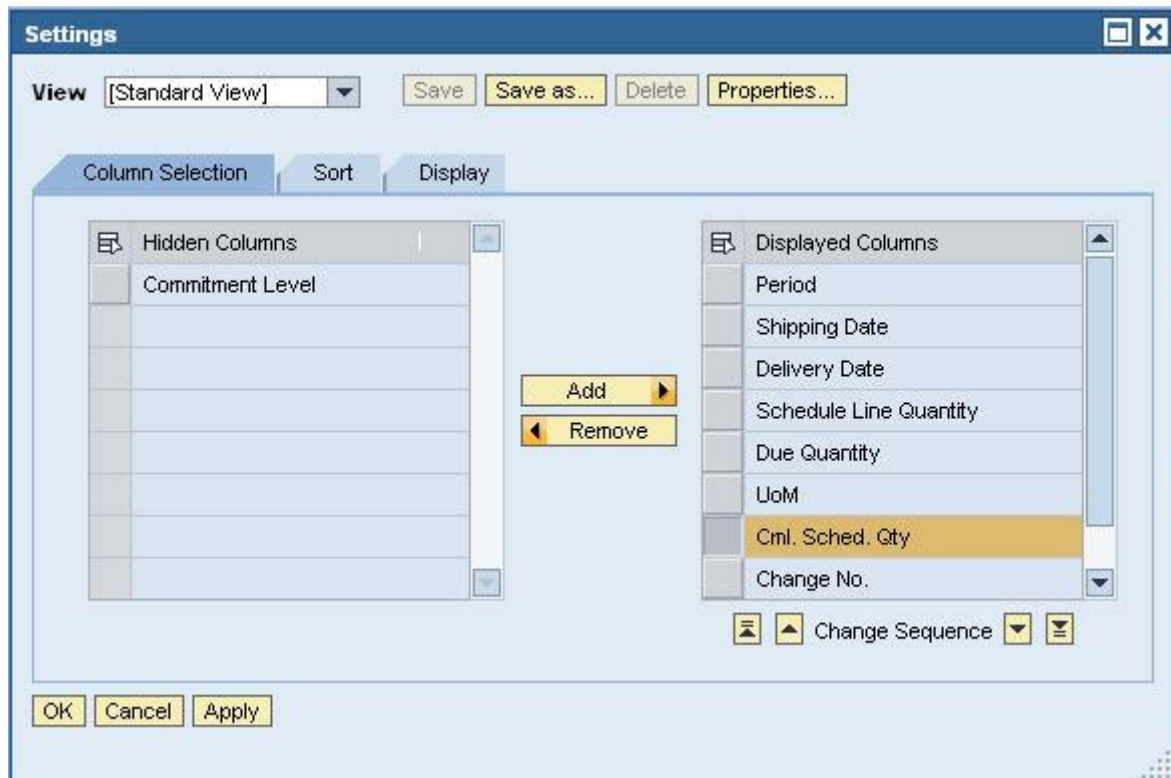

1.7 Personalize

Nearly all tables offer a personalize functionality:

- change the order of columns to your individual needs
- hide columns not needed
- change the number of rows

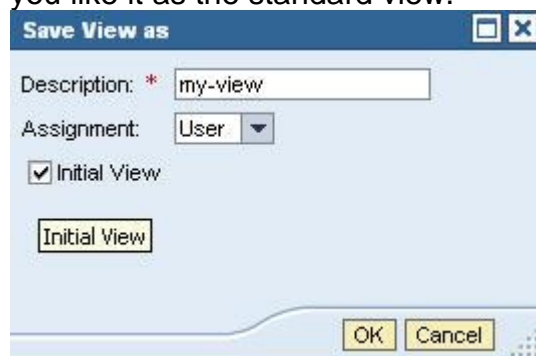

Press "Settings" on the top right-hand side of the table header and maintain the new table layout in the new screen.

Change the sequence or change the displayed or hidden columns by using the "add" and "remove" buttons.

On the other tabs you may change the sort order of the rows, filters and other display options, like number of displayed rows.

Click "Save as..." to save the settings for future use. Enter a name for the view and decide if you like it as the standard view.

User Manual Inventory Collaboration Hub

The column sequence may be changed by moving the columns directly in the table, too. Don't forget to save the settings, if you want the for future use.

User Manual Inventory Collaboration Hub

In the release process overview you can find all KOSTAL- delivery plans with the date of each last release.

Every release can be

- printed (displayed as PDF file and then printed) or
- downloaded as a CSV file or
- display the schedule lines

IMPORTANT:

Please confirm all new releases !!

If the new releases are not confirmed, you will automatically receive a daily reminder by email after the 5th day of opening the release.

In order to confirm a release, please mark it and click "Acknowledge".

In the column "Acknowledged" the actual date will be set automatically. This means releases without a date in the column "Acknowledged" were not yet confirmed by you!

For this overview you are able to:

- create a new delivery (ASN) directly, or
- download/export all data to a CSV-file, or
- navigate to a release

Use the due list to create new ASNs / deliveries.

Use Refresh to update the due list.

User Manual Inventory Collaboration Hub

3 Delivery/ASN

3.1 ASN Overview Supplier

The ASN list overview shows all **Advised Shipping Notifications** (ASN) by you. You can learn from the "Delivery Status" if an ASN was cancelled, not yet transferred ("Draft") or already sent to KOSTAL ("Published").

If KOSTAL could already book a goods receipt against one of your ASN, the ASN status will change to "Goods Receipt Complete".

(Attention: Transfer of goods receipt to an ASN will take effect with the next release of the delivery plan. This normally leads to that the "ASN Status" to "Goods Receipt Complete" will be set within a small delay of time to the particular time of booking!)

3.2 Create ASN from Due list

Step 1:

Mark a line of the due list and click on "Create ASN"

View my-view Details Create ASN Related ASNs Export						
Product	Ship-To Loc.	Due On	Due Qty.	UoM	Order Doc.Type	
66210110460301-00	0001	04.12.2010 12:00:00	55.545.425,000	PC	Forecast Delivery Sc	
66210110460301-00	0001	04.01.2011 12:00:00	2.000,000	PC	Forecast Delivery Sc	
66210110460301-00	0001	12.01.2011 12:00:00	1.000,000	PC	Forecast Delivery Sc	
66210110460301-00	0001	16.01.2011 12:00:00	1.000,000	PC	Forecast Delivery Sc	
66210110460301-00	0001	28.01.2011 12:00:00	1.000,000	PC	Forecast Delivery Sc	
66210110460301-00	0001	04.02.2011 12:00:00	1.000,000	PC	Forecast Delivery Sc	

Always select only one line, as an ASN may include only one material.

User Manual Inventory Collaboration Hub

Several line items maybe selected (one per vendor batch) if the batch must be entered in the ASN.kostal site specific requirement.

Advice:

If you like to deliver two or more parts of a delivery plan with an ASN, so create the ASN only to the first open schedule line and change the quantity according by the next step or change each line item qty to the qty per vendor batch.

Step 2:

Item No.	Product	Prod. Desc.	ASN Qty	Supl. Cuml. Qty	Qty UoM	Purch
1	66210110460301-00	TEST PART 2 ADDA_CONVERTER	55.545.425,000	0,000	PC	5520

- Enter your delivery note number in the field "ASN No.", if necessary (otherwise the system assigns a delivery/ASN number automatically)
- Adapt the "Delivery Date", if necessary (date of arrival at customer and this may not lie in the past)
- Adapt the "Shipping Date", if necessary (planned date of leaving supplier and this may not lie in the past)
- Adapt "ASN Qty", if necessary (first mark the line so that the field is ready to enter your data)
- The "Unloading Point" you will find at the corresponding table
- The "vendor batch" must be unique per line item.

If you like to print labels for the packages later, you have to save your ASN at this point! For that, click "Save/Draft".

Step 3:

Now click the "Packing" button near the ASN items table to pack the ASN (see chapter 4)

Step 4:

After packaging change to "Print All Labels" (see chapter 3.3)
Click "Back" to return to the ASN overview.

Step 5:

User Manual Inventory Collaboration Hub

Go to "Save/Publish" in order to send the ASN to KOSTAL.

Afterwards go to "Printing" in order to print the delivery note.

If you intend to send the ASN at a later point of time, please go to "Save/Draft". So you can select it later in the ASN overview and revise it by "Change" (see chapter 3.1).

3.3 Print Labels and Delivery Notes

Labels can be printed via the packaging dialogue (ASN create/change -> packing). For that, please select "Print all labels".

As well, you can print the labels single: mark the desired Handling Unit and go to "Print Label". The delivery note can be printed out by the ASN details (clicked by ASN create/change). Therefore, please click "Print". As long as the ASN has not been published, the item "Draft" occurs on the delivery note.

Following a new screen or tab is displayed starting the application AcrobatReader. Now a PDF-document with labels res. delivery notes to be printed will be loaded. For each pallet (group-HU) a separate PFG-file will be generated.

You can print out the document now and afterwards close the screen.

Advice to print labels in format DIN A 5:

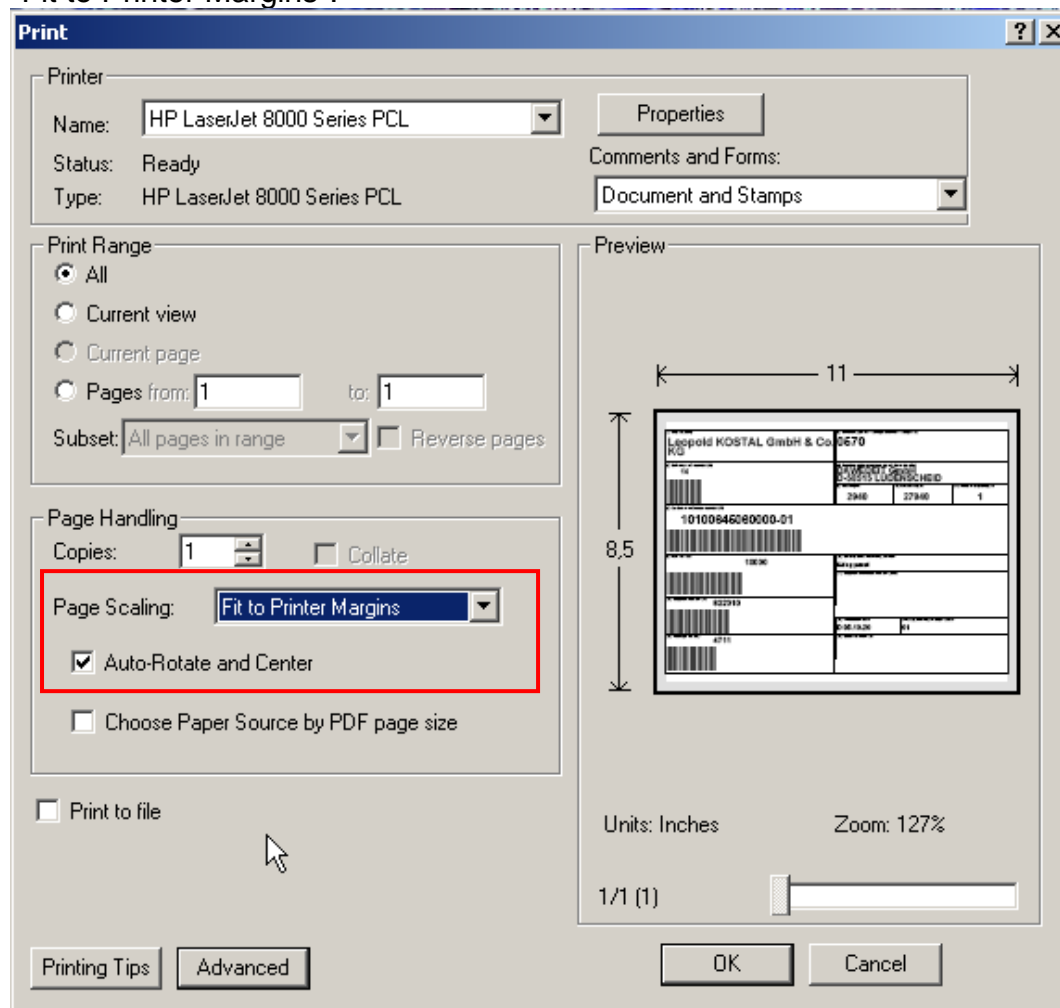

In order to print labels in paper-size DIN A5 correctly, you should change the following setting of the printing dialogue of AcrobatReader:

Go to printer settings and select the paper size A5.

User Manual Inventory Collaboration Hub

Select "Auto-Rotate and Center" in printing dialogue of AcrobatReader and the page adjustment "Fit to Printer Margins".

4 Packaging

It is essential that in the ASNs the exact packaging structure of the physical delivery is displayed. **Only complete packaged Advised Shipping Notes can be sent to KOSTAL!** You have the possibility to create the handling units of an ASN manually or to let determine them automatically. In the latter case, it is provided that a packaging instruction ("Packaging Specification") has been maintained (see chapter 4.3).

By the button "Packing" you will reach the packaging dialogue from the ASN.

Buttons in packaging dialogue:

Reload ASN: Reset to the last saved packing

Save ASN Draft: Saves the actual packaging status, handling can be continued later.

Automatic Packing: Packaging according specifications automatically

Check ASN: Revises, whether ASN corresponds to miscellaneous criteria:

- ASN includes only one item
- Quantity is packed completely

Create HU: Opens an area in which the packing material for the new HU can be entered

Cut: Copies the marked HU with all substructures in the clipboard

Paste: Inserts an HU with all substructures from the clipboard

User Manual Inventory Collaboration Hub

Pack: Allocation of material to HU

Unpack: Unpacking of the marked HU

Print label: Printing label of marked HU

Print all labels: Printing of all labels

Print HU subtree: Printing all labels of the marked HU tree

Expand: Displays subtree of marked HU or - if no HU has been marked - all HUs

Collapse: Closes the HUs again

4.1 Manual Packaging

As a matter of principle, all ASNs should be packed automatically with packing terms.

In the case that one ASN should be packed unusually, it can be packed manually.

For traceability purposes only items of the same vendor batch can be packed in one HU!

While manual packing all packages (Handling Units/HU) will be created single and the products get packed. HUs can be provided with own numbers.

Example: Following structure will be created:

2 boxes with x parts material on one pallet

Procedure:

1. Create HU with packaging material "pallet"
2. Create HU with packaging material "box"
3. Pack ASN position (=material) in "box"
4. Cut HU-"box"
5. Paste HU-"box" twice on "pallet"

Click "Packing" in ASN

You will see from the overview which material in which quantity is to be packed. The actual status of packaging, as well as absolute and in percent values will be shown by color codes with regard to the legend.

Export

Pack Level01	Pack Level02	Pack Level03	Pack Level04

Step 1:

Click "Create HU".

Now create an HU for your "pallet" and select the fitting packing material.

If you like to provide the HU number manually, you will have to do this at this point.

HU Details

Edit HU properties

HU:

Packaging Material:

Length:

Height:

Ok Cancel

Following, please confirm with "OK".

You will go back automatically to the packaging overview and see your "pallet" on the Pack Level01. The packing material, as well as the number of HU will be shown (separated by a dash).

Step 2:

User Manual Inventory Collaboration Hub

Now you have to mark the "pallet HU" and go to "Create HU" again.

		000001 -66210110460301-00 --33,000PC

Step 4:

In the case the quantity of material in each box is dissimilar (or if you like to provide the HU number manually) repeat step 2 and 3 as far as the material has completely been packed (color legend green).

User Manual Inventory Collaboration Hub

If the quantity in all or nearly all is identical, so you have to mark the *box-HU* and go to "Cut".

Mark now the *pallet-HU* and go to "Paste". Paste the box with the packed quantity as often until the total quantity has been packed.

If you like to copy a complete *pallet-HU* (step 1) including the *box-HUs* (step 2), so mark the *pallet-HU* and go to "Cut".

Ensure that no line is marked and go as often to "Paste" as the pallet has been replicated in the sum requested.

4.2 Automatic Packing

In order to pack automatically, you have to create a packing specification first and assign it to the corresponding material (see chapter 4.3).

If this is done correctly, the packaging specification will be shown automatically in the packing dialogue:

ASN Items - ASN n. - 00000136								
Automatic Packing Check ASN Save ASN / Draft Save ASN / Publish Reload ASN ASN Details								
View [Standard View] Export								
Item No.	Product	Product Description	ASN Quantity	Qty UoM	Packed Quantity	Packed Percentage	Pack. Spec. Identifier	
000001	66210110460301-00	TEST PART 2 ADDA_CONVERTER	99,000	PC	0,000	0	383	

If you have assigned different packaging specifications to one material (e.g. for different packaging materials), you can now mark a line and select a different packaging specification by the value help of the field.

Now refer to "Automatic Packing" and the system packs the total quantity according to the input of packaging specification.

4.3 Packaging Specifications (SNC)

In order to pack a material automatically, you have to create at least one guideline (packaging specification) and to assign it to the material.

A Packaging Specification (PS) consists of *Level*, *Content* and *Element*.

Level:

In general, a PS consists of two levels: pallet and boxes

At the area of the levels, you have to define first the level of boxes (level 1) and enter the maximum quantity of material per box.

Following you enter the maximum quantity of boxes of each pallet (level 2)

Elements:

At least one element belongs each level.

Elements define the exact packing material (plus possible added facilities like covers or blister) of each level.

Content:

Content is the product (material number) and will be assigned blanketly (not to each level separately)

4.3.1 Display Packaging Specifications

Before creating a packaging specification for the product, you should check if one does already exist.

Select in menu "Packaging" -> "Overview Packaging Specification"

Packaging Specification List				
<input type="button" value="Details"/> <input type="button" value="Copy"/> <input type="button" value="Delete"/>				
View [Standard View] <input type="button" value="Export"/>				
Packaging Spec.	Description	Packaging Specification Group	Group Description	PS
2	test	SAP	Standard	2
11	Luca	SAP	Standard	2

You will receive a list of all already created packaging specifications.

User Manual Inventory Collaboration Hub

You can see the created packaging structure when marking the packaging specifications and click to "Pack Spec Details".

Packaging Specification Details

Pack. Spec. ID 00000002

Packaging Specification Header Data

Packaging Specification Group:

Packaging Specification Identifier:

Content

View:

Cont. Seq. No.	Product	Product Desc.	My Product No.	Quantity
1	66210110460301-00	TEST PART 2 ADDA_CONVERTER		1,000

At this point of *PS-Content* you can see the material for which the packaging structure has been created.

4.3.2 Create Packaging Specification

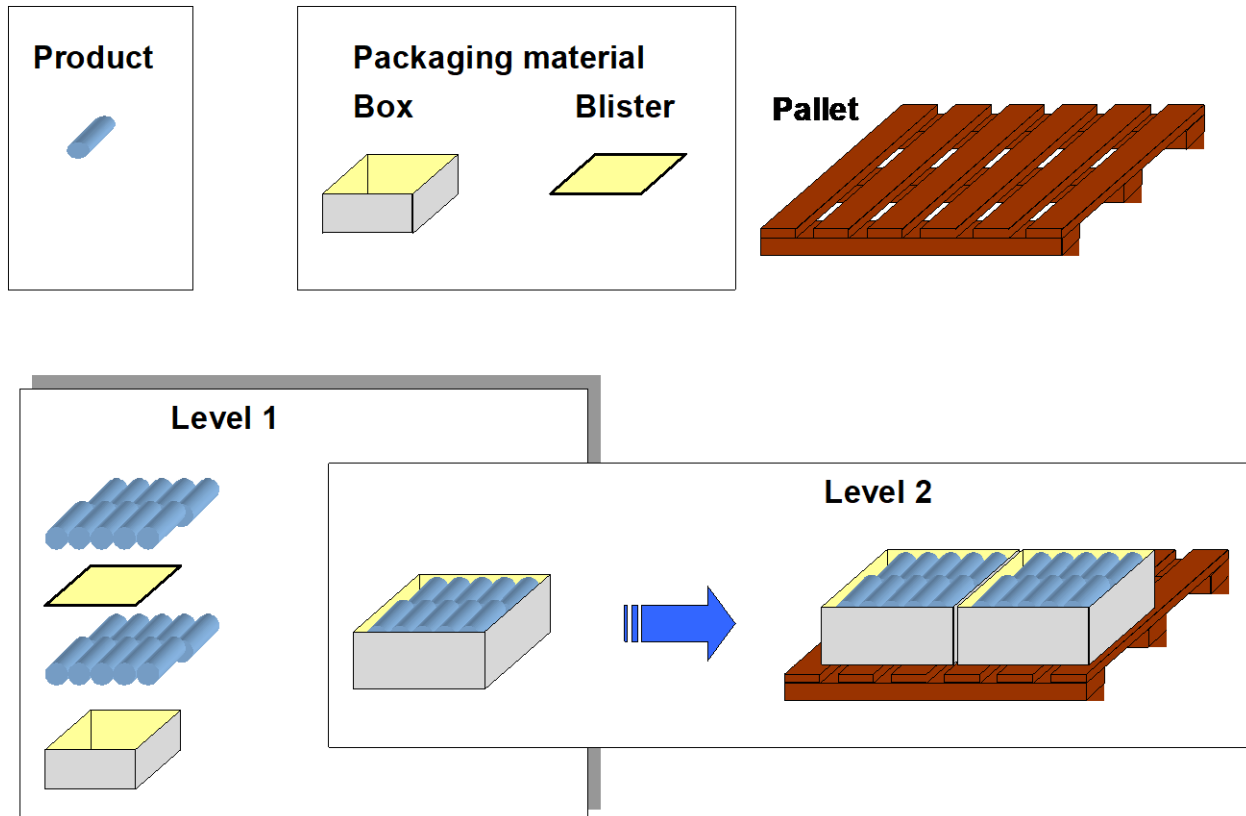

If no packaging specification is found, please click, "Packaging -> "Details Packing specification" in the menu. Go to the button "Create" and enter the packaging specification description.

First create the "Content".

Afterwards, the levels with their elements will be created.

Following structure will be arranged in the example:

User Manual Inventory Collaboration Hub

Step 1: Content

In the PS-Content it will be specified, which product has to be packed.

("What will be put into the box?")

As only one product may always be packed, only one line will be created.

For that, mark the line and click to the particular field.

Packaging Specification Details

Pack. Spec. ID: Change Number: 00000002

Packaging Specification Header Data

Packaging Specification Group: SAP - Standard

Packaging Specification Identifier:

Packaging Specification Desc.: 66210110460301-00 Pal

Packaging Specification Status: New

Pack. Spec. Change Number:

Content | Level | Admin Details

Content

View: [Standard View]

Cont. Seq. No.	Product	Product Desc.	My Product No.	Quantity
1	66210110460301-00			1

- Content Sequence: always enter "1"
- Product: select the material to be packed from the value selection

User Manual Inventory Collaboration Hub

- Quantity: always enter the smallest possible quantity in which the product can be packed (as a rule 1 piece)

By "Add Content" you can create further lines.

By "Delete Content" you can delete your data entered.

Now change to the table "Level"

Step 2: Create Level

With the PS-levels the packaging structure will be determined:

- Level "1" is the smallest packaging unit (**KLT**), e.g. a box
- Level "2" is the next larger packaging unit (**GLT**), the pallet.

Please check with KOSTAL site how many packaging levels are accepted.

The screenshot displays the 'Level' configuration page. At the top, there are tabs for 'Content', 'Level', and 'Admin Details'. The 'Level' tab is active. Below the tabs, there are buttons for 'Add Level' and 'Delete Level'. A 'View' dropdown is set to 'Standard View'. The main table has columns: 'Level Sequence No.', 'Target Quantity', 'Minimum Quantity', 'Round Quantity', and 'HU'. There are two rows: Level 2 (highlighted in orange) with Target Quantity 20, Minimum Quantity 1, Round Quantity 0, and HU checked; and Level 1 with Target Quantity 10, Minimum Quantity 1, Round Quantity 0, and HU checked. Below the table is a 'Related Elements' section with 'Add Element' and 'Delete Element' buttons, and another 'View' dropdown set to 'Standard View'. The table below this section has columns: 'Elem. Seq. No.', 'Packaging Material', 'Pack. Mat. Description', 'HU-Relevance', and 'Quantity'.

Level Sequence No.	Target Quantity	Minimum Quantity	Round Quantity	HU
2	20	1	0	<input checked="" type="checkbox"/>
1	10	1	0	<input checked="" type="checkbox"/>

Elem. Seq. No.	Packaging Material	Pack. Mat. Description	HU-Relevance	Quantity

- Level sequence: "1" for "box level", "2" for "pallet level" or outer level and so on per level
- Target Quantity: maximum quantity of products in each box or maximum number of boxes on pallet

The target quantity on level 1 must be equal to the maximum number of parts in one box, e.g. 20.

The target quantity on level 2 must be equal to the number of the boxes on the group HU (pallet), e.g.10. In this example, the pallet will be able to take 200 pieces as maximum.

- Minimum Quantity: minimum quantity of products in each box or minimum number of boxes on pallet.

User Manual Inventory Collaboration Hub

The minimum quantity on each level must be between 1 and the target quantity. If you deliver only full boxes or pallets, the minimum quantity is equal to the target quantity. The example would allow packing and delivering 1 piece in one box on one pallet.

- Round Quantity: as a rule: packaging unit
- HU: select this field always.

Now select the level to define the packing material

Step 3: Create elements per level

Mark to "Level sequence" where the next element is to be defined and push "Elements" button. A new table is opened. Please push "Add Element".

The screenshot shows the 'Level' tab in the KOSTAL Inventory Collaboration Hub. The 'Level' table has columns: Level Sequence No., Target Quantity, Minimum Quantity, Round Quantity, and HU. The first row (Level Sequence No. 1) is highlighted in yellow. A red box is around the '1' in the 'Level Sequence No.' column, and a red arrow points from it to the 'Add Element' button in the 'Related Elements' section below. The 'Related Elements' table has columns: Elem. Seq. No., Packaging Material, Pack. Mat. Description, HU-Relevance, and Quantity. The first row (Elem. Seq. No. 1) is highlighted in yellow. Red boxes are around the '1' in the 'Elem. Seq. No.' column, the '71948000000002' in the 'Packaging Material' column, the '1' in the 'HU-Relevance' column, and the '1' in the 'Quantity' column.

Level Sequence No.	Target Quantity	Minimum Quantity	Round Quantity	HU
2	20	1	0	<input checked="" type="checkbox"/>
1	10	1	0	<input checked="" type="checkbox"/>

Elem. Seq. No.	Packaging Material	Pack. Mat. Description	HU-Relevance	Quantity
1	71948000000002		1	1

- Element Seq: Start always with "1" for the box where the product is packed into. If additional returnables are used for packing (like top cover, blister), additional elements with increasing sequence number have to be created.
- Packaging Material: Enter or select the used packing material from the value help
- HU-Relevance: Enter "1" in the line for packing material (box, pallet) and "2" for auxiliary material (top cover, blister etc.). Label will be printed for HU-relevant elements.
- Quantity: In HU-relevant line enter always "1". For auxiliary material enter the number of materials per box (e.g. "4" for 4 blister per box).

Mark now the second Level.

The lower table for "Elements" will be shown again blank. At this place click on "Add Element" and proceed as above mentioned!

User Manual Inventory Collaboration Hub

Step 4: Pack specification completment and saving

- Enter a description in the field "Pack Spec.-ID Desc." to the PS
- Save the PS
- Activate the "Pack Spec Status", otherwise the PS can not be used

Buttons: Create, Change, Display, Check, Save, Activate, Deactivate, Create 2nd Version, Delete, Copy

Packaging Specification Header Data

Packaging Specification Group: SAP - Standard

Packaging Specification Identifier: 383

Packaging Specification Desc.: 66210110460301-00 Pal

Packaging Specification Status: **Active**

Pack. Spec. Change Number: 00000001

The system allocates a definite number automatically.

The new PS has to be assigned now.

Step 5: Pack specification assignment

Select in menu "Packaging -> Supplier View -> Assign Pack Specification".

Check the actual assignment first by selecting them.

Then click on " Create/Change PS Assignments" and "Insert line" in order to create a new assignment.

Enter the product to be packed, priority and the number of pack specification.
Do not forget to save your data entry.

66210110460301-00	333333	2	21

This PS will be automatically proposed for packing the next ASN in future!

Advice:

- The material of *Allocation* has to agree on the Content of the PS!!

User Manual Inventory Collaboration Hub

- Please ensure that you have entered the data in all fields in the PS as above mentioned. (Fields like quantity and UoM have to be completed as well, otherwise the PS can not be shown in the packaging dialogue.)
- For the same material you can define and allocate different PS. In this case, please regard to define different priorities. The PS with the lowest priority number will be automatically proposed in the packaging dialogue, but it can be changed manually.

5 Alerting

Alerting means, that you will be kept informed about exceptional circumstances or important modifications by email. Alerting will be initialized by KOSTAL for you.

5.1 Selection of Alerts

Select in Alert Monitor e.g. the most important Alerts for the Release Process:

- 0023 New Release
- 0024 Unconfirmed Release

Selection

Show

Planner:	<input type="text"/>	To	<input type="text"/>	<input type="button" value="→"/>

Alert number	Location No.	Product	Alert Type	Partner From
3888	0001	66210110460301-00	New Scheduling Agreement Release	700015

You can mark all Alerts of one page and select following function:

- *Acknowledge* (later you can use it as a selection criteria and display only the not acknowledged and therewith new Alerts)
- *Delete Alert*
- *See Details* (in this example you will receive the new release)
- *User action* and *Notes* are not active at present.

5.2 Alert message generation

The basic data administration of Alerts will be done in the ICH. Based on the selection profile (which Alerts?) a notification profile will be deposited, which in turn does affect how the particular message will be sent.

KOSTAL will make a presetting for you, which - as far as possible - should not be changed. Only refer to the message profile in order to change your email address.

5.2.1 Selection profile arrangement

The selection criteria *Alert Type*, *Ship-to Location* and *Product* of the message profile will be "continued in use", this means they provide as basis for the selection of creating messages. All further selection criteria serve only for restriction of Alert screen and will not be used when creating an Alert message.

- Select *Alert-Type* 0023 to 0024

User Manual Inventory Collaboration Hub

- Refer now to "Save as..." in order to save your data entered. At this place you have the possibility to assign a name for this selection.

Periodic Notification:

Alerts, which have set this character in their notification profile, will be collected and sent every night.

Unacknowledged Alerts only:

The Alert messages should only contain Alerts, which have not been confirmed yet.

6 Quick-Guide

In this range you will find the most important information for working with ICH in a brief summarized version.

- **Alerting**
You will receive an email automatically, as soon as a new due list release is available in the ICH.
In the same way, you will get informed by email, if you do not acknowledge new releases within 5 days in the ICH.
- **Acknowledgement of releases**
You have to confirm all releases within 5 days. Refer to the release overview, see the new releases and click to the button "Acknowledge". The releases will be marked as confirmed. This acknowledgement is no acceptance for delivery and does only serve for securing that you have registered a new release.
- **Pack specifications**
Please create packing specification according to the agreed with KOSTAL packaging structure for all materials. This is a one-time expense per each material and simplifies considerably the creating of ASN.
- **Due list**
You will find the scheduling of all releases ordered by date in the due list. Thus, you will record which materials in which quantity have to be delivered next. You can create an ASN for KOSTAL directly from the list.
